План

1. Вступ (1-2 ст.). Актуальність, Мета, Завдання, Об'єкт, Предмет, Рівень опрац. теми в Україні та заруб. літературі

2. Теоретичні засади сталого розвитку:

2.1. Еволюція поняття, сутності та проблем сталого розвитку в міжнародному та національному контексті

2.2. Теоретичні засади сталого розвитку в підприємницькій діяльності

3. Практичне застосування стратегій сталого розвитку в міжнародному підприємстві:

3.1. Визначення/модель сталого розвитку підприємства, його соціально-економічних та фінансових показників

3.2. Механізми запровадження та регулювання стратегій сталого розвитку підприємства

3.3. Реалізація стратегій сталого розвитку в діяльності «ASTARTA»

4. Висновки

Ivan Varga

Comillas Pontifical University

Ukraine

varga700@ketmail.com

Dear Madame or Sir,

I have to admit – I am a very competitive person. Whatever endeavor I start – I need to be first. It is not just I choose to not stop, until I am the best, I simply can't stop until I reach my goals or my limits.

I have always been passionate about sciences, and particularly mathematics and its applications in real life. This is how I like to view Business Analytics – as a tool to combine a variety of social and psychological aspects of business with a profound understanding of quantitative principles that underlie it. However, in today's diversified world, to simply "do the numbers" or get theoretical knowledge from dusty books would never make you excel. It is just as important to be able to manage people efficiently and communicate your skills to others to become a highly valued specialist. This is why I think that the double degree in Business Analytics and MBA offered by Comillas, together with the university's rich history and an international setting, could fulfill my dream of becoming a successful

Automation of calculations and model creation: 1) first analysis, settlement capture, data processing; 2) Automation of repetitive tasks; 4) Automating research design, data collection, and analysis; 5) Automating research design, data collection, and analysis. The top two common paper procedures that LUMs could help solve currently with are: 1) Automation of calculations and model creation; 2) first analysis, settlement capture, data processing; 3) Automation of repetitive tasks; 4) Automating research design, data collection, and analysis; 5) Automating research design, data collection, and analysis. These areas can be used for small businesses as they can help streamline the research process. With data collection and analysis in the creation of models and the design of research, LUMs can automate repetitive tasks, freeing up time for researchers to focus on more complex aspects of their work. They can also assist in first analysis and settlement capture, which are important for understanding social phenomena. Furthermore, LUMs can help in research design, data collection, and analysis, ensuring that the research process is efficient and effective.

revenue could be associated with institutional trust however differences in KS calculation are mainly driven by population numbers due to tax revenue not entering the formula per capita.

- Further shock in 2017 as the AfD (far right party) entered the German parliament for the first time: possible that relying around the flag only happened due to this; however, we control for political alignment.
- We did not identify a mechanism: this went over the scope of this research paper, hypothesis: two possible mechanisms – 1. Actually meeting refugees

2. Actively following news on immigration; 1. Assumes everyone has a fixed probability of meeting refugees due to the number of asylum applicants in their state; the other assumes that all individuals follow the news on immigration topics / their attitudes towards it are shaped by it;

Discussion:

- increased exposure to immigration decreases trust in institutions, however post-refugee crisis this effect is minimised (still negative); we assume this is

Introduction:
Institutional trust refers to citizens' trust in the competence and integrity of institutions, including both national and international level.
It is a fundamental component of political life: it ensures the citizens' participation, the effectiveness of implemented policies and the perceived legitimacy of institutions (Dowley & Day 2004).

Levels of institutional trust are shaped by individual characteristics, such as age, gender, income, education, and external, exogenous factors (OECD paper 2018). Among these forces, crises are particularly influential as they can rapidly change expectations, perception of institutions and reliance on political power. (focus on economic crisis decline Foster & Frieden 2017)

- "Blindfold Light" challenge – fansites and friends doing the same dance to The Weeknd's hit song
- "WAP" challenge – Cardi B & Megan Thee Stallion's dance that sparked both controversy and virality

Fuckies & Aesthetics

- Cergipops – a romantic, rasko-aspirant aesthetic (floral dresses, soft colors, baking, nature);
- E-girl / E-boy style – influenced by anime, new culture, and passing aesthetics;
- Y2K revival – early-2000s fashion (low-rise jeans, butterfly clips, baby tees) made a comeback;
- Clean girl / Y2000 girl aesthetics – minimal makeup, slick hair, "effortlessly polished" looks.

Food Trends

- Whipped coffee (Dalgona coffee) – viral during the first COVID lockdowns;
- Tostitos pasta – the baked bean and tomato pasta trend in early 2021;
- Cloud bread and mini pancake cereal – other major lockdown food trends.

Music Discovery

понятті елементах дослідники вважали серйозну конфліктогенність [34, ст. 93].

Період з 1990-их до 2015 р. характеризувався зростанням зацікавленості дослідників

те, оскільки створення сталого розвитку та її практичному застосуванні побудовано
